Mathematics in most other countries (and in a few U.S. states) is integrated, with topics from all branches of mathematics studied every year. Students in many countries choose an option or pre-defined course of study rather than choosing courses a la carte as in the United States. Students in science-oriented curricula typically study differential calculus and trigonometry at age 16–17 and ...

Many children in developing countries grow up in economically poor environments and often also suffer from poorly performing educational systems. Dillon et al. designed inexpensive, locally sourced games—five for mathematics and five for social cognition—for use in preschools in Delhi. They measured the effects of these interventions 3, 9, and 15 months later.

A cluster randomised controlled trial involving eight teachers at each of 24 schools found significant positive effects on teaching quality (d = 0.4), independent of school type (primary/secondary), school location (urban/rural), and years of teaching experience. These effects were sustained six months later. Qualitative data are used to illustrate mechanisms underpinning the success of the ...

Participation rate has a huge impact on state average SAT / ACT scores. In any state, the top students on the SAT/ACT are most eager to take it, and so states with low participation rates mechanically have higher SAT / ACT scores. Here, we use advanced statistical methods to control for participation rate to get at the real ranking of states by their real SAT and ACT score.
