Goldstein remarks that continental authors usually use α , and warns that left-handed coordinate systems are also in occasional use (Osgood 1937, Margenau and Murphy 1956-64). Varshalovich (1988, pp. 21-23) uses the notation α or β to denote the Euler angles, and gives three different angle conventions, none of which corresponds to the α -convention.

$R = \text{rotz}(\text{ang})$ creates a 3-by-3 matrix used to rotate a 3-by-1 vector or 3-by-N matrix of vectors around the z-axis by ang degrees. When acting on a matrix, each column of the matrix represents a different vector. For the rotation matrix R and vector v, the rotated vector is given by $R \cdot v$.
